(Anhui, P.R. China, strain), of mixed sex, were perfused
from the mesenteries of experimentally infected mice and
rabbits at the Queensland Institute of Medical Research,
Erisbane, Australia (GIMR), and stoored for several months
in liquid nitrogen. Subsequently, mRNA was isolated at the
GIMR from lysates of these worms by oilgo dT
chromatography, using a kit from pharmacia. The mRNA was
then shipped to Clontech, Palo Alto, CA, USA, who
constructed a cDNA library. First strand synthesis was
primed with an oilgo-dT-Xhol-primer and synthesis was
primed with an oilgo-dT-Xhol-primer and synthesis was
primed with an oilgo-dT-Xhol-primer and synthesis was
accomplished with RNAse H and T4 DNA polymerase. The
double stranded cDNA was ligsted to EcoRI linkers,
digested with EcoRI and XhoI, and ligated into the
phagemid vector lambda ZAP II XR. After construction of
this directional library by Clontech, it was returned to
the QIMR. During analysis of the library at the QIMR, we
have found that a small percentage, 2% to 3%, of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hanzg@chgc.sh.cn.

               TITLE
JOURNAL
```

clones contain inserts that appear to be highly homologous to sequences from salmonoid fishes, as determined by homology comparisons using BLAST and by Southern hybridization analysis to genomic DNA from salmon (Sigma Chemical Co., St. Louis, MO) under stringent washing conditions. The remainder of the clones appear to contain S. japonicum sequences."

/note="Organ: Pool of sugarcane calli submitted to low
/note="Organ: Pool of sugarcane calli submitted to low
(4oC) and high (37 C) temperature stress; Vector:
pBlurScript; Site 1: EcoRI; Site 2: XhoI; An
unidirectional cDNA library generated from [Pool of
sugarcane calli submitted to low (4oC) and high (37 C)
temperature stress]. cDNA was prepared from polyA+ mRNA
using ZAP - cDNA Synthesis Kit (Stratagene). The
double-strand cDNAs were fractionated in a sepharose CL-2B
40cm-columns and fragments sizing between 0.8 and 1.5 Kb
were directionally cloned into the vector. Details of
each source of RNA and library construction can be
obtained at http://sucest.lad.ic.unicamp.br/public"

Sample name: IDDAPA; Plant growth place: Department of
Ecology & Evolutionary Biology, Princeton University;
Soil conditions: Soil; Sowing date: 01/06/1999;
Harvesting date: 01/06/1999; Stress date: no stress;
Description: Aphids inoculated on one-week old Vicia faba
under non-sterile conditions. All parthenogenetic stages
and both winged and wingless adults were collected for
library construction.; experimental condition: long
photoperiod (16-hr light/8-hr dark at 18 c)"

Martin, G.B., Tanksley, S.D. and Giovannoni, J.
Generation of ESTs from tomato seed tissue
                                                                                                                                                                                                                                                                                          AW036134
383 bp mRNA linear EST 18-MAY-200
EST274510 tomato seed, TAMU Lycopersicon esculentum cDNA clone
CLES1E23 similar to periplasmic phosphoanhydride phosphohydrolase
precursor, putative, mRNA sequence.
AW036134

/note="Vector: Lambda ZaP-II XR.; Site_1: EcoR I; Site_2:
Xhol I; Several hundred adult Schistosoma japonicum
(Anhui, P.R. China, strain), of mixed sex, were perfused
from the mesenteries of experimentally infected mice and
rabbits at the Queensland Institute of Medical Research,
Brisbane, Australia (QIMR), and stored for several months
in liquid nitrogen. Subsequently, mRNA was isolated at the
QIMR from lysates of these worms by oilgo dT
chromatography, using a kit from pharmacia. The mRNA was
then shipped to Clontech, Palo Alto, CA, USA, who
constructed a cDNA library. First strand synthesis was
then shipped to Clontech, Palo Alto, CA, USA, who
constructed a cDNA library. First strand synthesis was
primed with an oilgo-dT-XhoI-primer and synthesis was
accomplished with RNASE H and T4 DNA polymerase. The
double stranded cDNA was ligated to EcoRI linkers,
digested with EcoRI and XhoI, and ligated into the
phagemid vector lambda ZAP II XR. After construction of
this directional library by Clontech, it was returned to
the QIMR. During analysis of the library at the QIMR, we
have found that a small percentage, 2% to 3%, of the
clones contain inserts that appear to be highly homologous
to sequences from salmonoid fishes, as determined by
homology commarisons using BLAST and by Southern
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        86-21-50801922
